

Workflow Manual

Open play, start to finish — login, setup, running matches, check-in and the live view.

Pickleball session manager (Version 1)

The simple open-play app: one queue-based flow, name-only check-in.

Contents

1. Core concepts & the four tabs
2. Logging in
3. The dashboard — create, resume, delete
4. Setting up — players & courts
5. Running matches
6. Players & attendance (present / on hold / delete)
7. Player check-in (QR) — admin panel & approvals
8. The player check-in page
9. The live View page
10. Ending a session

1. Core concepts & the four tabs

Paddle District (v1) runs open play with one simple flow: longest-waiting players get the next court.

- **Players** — everyone in the session. Each is either **Here** (in play) or **On hold** (kept in the session but not matched).
- **Courts** — the courts you add. Each hosts one match at a time.
- **Queue** — players waiting, ordered by who has waited longest. An **On hold** section sits below it.
- **Rankings** — the leaderboard plus editable match history.

The four tabs are **Players**, **Courts**, **Queue**, **Rankings**. A **Share** link / QR on each tab opens the read-only live View.

EXAMPLE ROSTER (DOUBLES, 2 COURTS)

We'll use eight drop-ins — Alex, Bea, Caro, Dan, Eve, Finn, Gia, Hugo — to illustrate. (v1 doesn't track skill levels.)

2. Logging in

1. Open the app. The login screen shows the Paddle District logo and a **Version 1** label.
2. Sign in with **Continue with Google**, or **email + password** (tap *Sign up* the first time).
3. You land on the **dashboard**.

Only the organizer logs in. Players use the check-in link and the View link — no account needed.

3. The dashboard — create, resume, delete

Create a session

1. Enter a session **name** and **date**.
2. Create the session. **Check-in is Open by default**.

That's it — v1 has a single open-play format (no mode picker). You go straight into the app.

Resume or delete

Past sessions are listed on the dashboard. Tap one to **resume** exactly where you left off (saved live), or delete one you no longer need.

4. Setting up — players & courts

Add players

1. On the **Players** tab, use **Add Players** (one name per line) and tap **Add Players**.
2. Mark who is here: each row has a **Here ✓ / Add to queue** toggle. Tap to set a player **Here**.

Add courts

1. Go to the **Courts** tab.
2. Type a court name (e.g. *Court 1*) and tap **+ Add Court**. Repeat per court.

You can also gather players with the **QR check-in** (section 7) instead of typing names.

5. Running matches

v1 matches the longest-waiting players to open courts.

1. On a court, tap **Generate Match** — the longest-waiting players are paired automatically.
2. Type each side's score and tap **Submit Score**. The result credits whoever is on the court at submit time. Players return to the queue and the next match is ready.

EXAMPLE

The eight join the queue in order. Court 1 auto-fills the longest-waiting four: Alex & Bea vs Caro & Dan . Eve, Finn, Gia, Hugo wait. After the result, those four go to the back and the next four come on.

Mid-match controls

- **Swap** ($\rightleftharpoons$) — next to each player; substitutes someone from the queue.
- **Cancel match** — ends with **no score**; choose *back to the queue* or *put on hold*.
- **Close court** (✕) — removes the court. With a live match it asks first; if a score is entered it offers **Record & close** or **Close without recording**; players go back to the queue.

Edit a past score

On the **Rankings** tab, each match-history row has a  **edit** button. Editing a score reverses the old result and applies the new one to the players' stats automatically.

6. Players & attendance

- **Here** ✓ — in play and eligible for matches. Tap to put a player **On hold**.
- **Add to queue** — shown when a player is on hold; tap to bring them back.
- **On hold** — kept in the session but not matched. Held players appear in the **On hold** section below the waiting queue, each with an **Add to queue** button.
- **Delete** (🗑️) — permanently removes a player and their stats (asks first). Use *hold* instead if they might return.

Putting someone on hold never loses them — bring them back any time. Deleting is the only permanent removal.

7. Player check-in (QR) — admin side

Let players check themselves in from their phones (name only in v1).

Open / share check-in

1. On the **Players** tab, find the **Player check-in** panel.
2. Tap **Show QR** to reveal the code, or copy the **check-in link**.
3. Toggle **Open / Closed**. The Open state is saved — it stays open even if you log out; check-ins only enter the game while your admin app is running.

Approving people not on the list

1. A check-in whose name **matches an existing player** is marked **Here** automatically.
2. A name **not on the roster** appears in a **Pending approval** list (tagged **NOT ON THE LIST**) with **Approve / Reject**.
3. **Approve** adds them as a present player; **Reject** discards. Pending requests survive a reload until you act.

Firebase rules must be configured once in the project console for anonymous check-in writes to be accepted. If check-ins are denied, that ruleset hasn't been applied.

8. The player check-in page

What a player sees when they open the check-in link / scan the QR.

1. The page shows the session name and the organizer's **roster**.
2. The player **taps their name(s)** and taps **Check in (N)**. Names already present show greyed as **Here ✓**.
3. If their name isn't listed, they tap **"My name isn't listed - add me"** and enter it — new names go to the organizer's **Pending approval**.
4. A confirmation then shows their name(s), a **"See live courts & standings"** link to the View page, and a **Check in more** button.
5. If check-in is **Closed**, the page shows a "check-in is closed" message.

EXAMPLE

Caro opens the link, taps **Caro** from the roster, and checks in — she's marked **Here**. A walk-in named **Iris** isn't listed, so she taps "add me"; the organizer then sees **Iris** under Pending approval ("not on the list").

9. The live View page

A read-only, real-time mirror for players and spectators — no login.

- Open it from any tab's **Share** link / QR, or the link players get after checking in.
- **Courts** — live matches (Team A / Team B) with the running timer.
- **Queue** — who's waiting.
- **Rankings** — the live leaderboard.
- **Match history** — completed games (searchable by name).

EXAMPLE

Spectators see Alex & Bea vs Caro & Dan on Court 1 with the timer, while Eve, Finn, Gia and Hugo show in the Queue.

The View updates automatically and, after a session ends, shows the final standings and history.

10. Ending a session

1. In the session header, tap **End Session**.
2. The session is marked ended; the live View switches to final standings and history.
3. You can still resume past sessions from the dashboard.

The full loop: **log in** → **create session** → **add players & courts (or QR check-in)** → **Generate Match & submit scores** → **share the View** → **end the session**.
